Installation & Repair – Residential & Commercial – New Construction & Retrofit – Solar Electric

Solar Panel Installer

Full Spectrum Solar, a leading Wisconsin design/build solar contractor, is currently seeking photovoltaic module (solar panel) installers. If you want to be considered for this position, please provide **a resume and include a short cover letter describing why you are interested in this position.**

This is a great opportunity to work with experienced (and friendly and fun) installers and engineers who have years of experience in the solar energy industry. We'd like to hire someone with at least a year or two of construction or engineering/technical experience, but we will consider other relevant experience/skills. Job responsibilities include constructing PV mounting racks and installing PV modules under supervision for commercial and residential sites. The position requires following schematics, written instructions, and verbal directions. The work includes mounting PV panels on roofs, trellises, and ground-mount racks. The position may occasionally require assisting electricians with installing inverters and associated electrical equipment under supervision.

Ideal position for a person who is hands-on, mechanically inclined, and self-motivated. Previous solar, construction, engineering, or electrical experience or training is strongly desired. The work is physically demanding and involves heights. After the mounting racks are constructed, solar modules are individually carried and positioned repeatedly on roofs and weigh up to 75 pounds. You will need to be comfortable working on roofs and ladders. A valid driver's license is required.

Full Spectrum Solar is an Equal Opportunity/Affirmative Action Employer.

Job Type: Full-time

Pay: \$19.00 - \$24.00 per hour depending on experience
